4 Chapter 1 Solutions Proof. If $(a=b)^m = n$, then $a^m = b^m n = 1 = 0$. Thus by Exercise 1.7, $|b^m| = 1$, and so $b = 1$. Next suppose $n = 1 = a^m$ where $(a;b) = 1$. Then $n = (a=b)^m$, which we now know implies $b = 1$. Therefore $n = a^m$, i.e. n is an m th power. Exercise 1.14. If $(a;b) = 1$ and $ab = c^n$, prove that $a = x^n$ and $b = y^n$ for some x and y . [Hint: Consider $d = (a;c)$.] Proof.

Rudin's Principles of Mathematical Analysis is the one to beat in this field. Apostol's treatment is not that different from Rudin's. The books were written about the same time, with Rudin having editions in 1953, 1964, and 1976, and Apostol in 1957 and 1974. The coverage of the two books is roughly similar.

Tom Apostol, who is still alive and enthusiastic about all kinds of mathematics, is well known for several textbooks on calculus at all levels. My first encounter was with his undergraduate text. I've had this book on my shelf for many years now and I regularly resort to it when I need clarification of points in analysis.

A very good review of these results can be find in the volume 4 of Thirring's "A Course in Mathematical Physics". Even the book version is a bit hard to read, as much mathematical analysis is required. The "Analysis" of Lieb and Loss is a book on analysis which has as a theme the great result of Lieb and Thirring. It is a real book on analysis.
